

Giulia Supremo

The whole new Sensa Giulia

Brings you the best in what's currently available in road racing. Packed with features, from the aero-style headtube to the carbon dropouts, it's all new. The frame is compatible with Di-2 and has got full internal cablerouting. Also when using regular cables the cables run fully internal. The frame can be changed from regular cable to Di2 with a small kit that comes with each frame. So it's possible to upgrade your Giulia to be Di2 later on and still have the perfect internal cablerouting. It's massive bottombracket is compatible with double, compact and triple cranksets. We use the latest technologies to make the frame light, stiff, durable and reliable. For each size we optimized the geometry as well.

**Giulia,
the most advanced Sensa ever!**

Giulia & Giulia Supremo

The Giulia and Giulia Supremo share the same mould and have the same features. Only the Giulia Supremo has an even more advanced fiber-mixture, which reduces the weight even more.

**The Giulia Supremo
will be available summer 2012.**

Full Carbon Dropout

Lightweight design - also compatible with junior cassettes.

Quick Wheel Release

The smart dropout design makes a wheel change faster than ever.

Di2 Ready

The frame can be used with Di2 as well as regular cables.

Hidden Battery-mount

The battery is tucked away under the raised left chainstay.

PressFit EightySix

The PF86 bottombracket allows maximum downtube width.

Zero Void Curing

ZVC-technology creates smooth inner surfaces with less material.

Generation 5 Carbon

G5 carbon is our latest optimized mix in carbon-fiber.

One Point Five

The 1.5 lower bearing creates maximum stiffness.
